```

Evidence

Evidence from `web_search`

The Harvard Kennedy School of Government published an article, "Genetic citizenship: DNA testing and the Israeli Law of Return," which examines the use of genetic tests to determine Jewish identity for immigration purposes in Israel ([image:k Source](#)). Another article from Harvard University discusses the use of genetic tests to determine if potential immigrants are Jewish, published in 2015 ([image:k Source](#)).

Nature.com discusses a bill proposing stringent restrictions on the use of genetic information in Israel, passed by the Israeli parliament's science committee ([image:k Source](#)).

Elaboration

1. The evidence suggests that DNA testing is not illegal in Israel. Instead, it is used in specific contexts, such as determining Jewish identity for immigration.
2. The evidence mentions a bill proposing restrictions on the use of genetic information, implying that the use of genetic information is regulated, not illegal.
3. The claim is not supported by the evidence.

Final Judgement

The evidence indicates that DNA testing is not illegal in Israel, but it is used in specific contexts, such as determining Jewish identity for immigration. Additionally, there are regulations on the use of genetic information. Therefore, the claim is not accurate. `false`

Verdict: FALSE

Justification

The claim is false. While there are regulations on the use of genetic information, DNA testing is not illegal in Israel. Evidence from Harvard University ([Source](#)) and Nature.com ([Source](#)) indicates that DNA testing is used for purposes like determining Jewish identity for immigration and is subject to legal restrictions, not outright prohibition.
