

# Claim

Claim: "It is illegal to do a DNA test in Israel."

## Actions

```
web_search("DNA testing legality Israel")
```

## Evidence

### Evidence from `web_search`

The Harvard Kennedy School of Government published an article, "Genetic citizenship: DNA testing and the Israeli Law of Return," which examines the use of genetic tests to determine Jewish identity for immigration purposes in Israel ([image:k Source](#)). Another article from Harvard University discusses the use of genetic tests to determine if potential immigrants are Jewish, published in 2015 ([image:k Source](#)). Nature.com discusses a bill proposing stringent restrictions on the use of genetic information in Israel, passed by the Israeli parliament's science committee ([image:k Source](#)).

## Elaboration

1. The evidence suggests that DNA testing is not illegal in Israel. Instead, it is used in specific contexts, such as determining Jewish identity for immigration.
2. The evidence mentions a bill proposing restrictions on the use of genetic information, implying that the use of genetic information is regulated, not prohibited.
3. The claim is not supported by the evidence.

## Final Judgement

The evidence indicates that DNA testing is not illegal in Israel, but it is used and regulated in specific contexts, such as determining Jewish identity for immigration. The sources mention the use of DNA tests and a bill proposing restrictions on genetic information, which suggests that DNA testing is not prohibited.

false

**Verdict: FALSE**

### Justification

The claim is false. While the use of genetic information is regulated, DNA testing is not illegal in Israel. Evidence from Harvard University ([Source](#), [Source](#)) and Nature.com ([Source](#)) indicates that DNA tests are used for purposes like determining Jewish identity for immigration and that there are restrictions on the use of genetic information, but not a ban on testing.
