```

Evidence

Evidence from web_search

The Harvard Kennedy School of Government published an article, "Genetic citizenship: DNA testing and the Israeli Law of Return," which examines the use of genetic tests to determine Jewish identity for immigration purposes in Israel ([image:k Source](#)). Another article from Harvard University discusses the use of genetic tests to determine if potential immigrants are Jewish, published in 2015 ([image:k Source](#)). Nature.com discusses a bill proposing stringent restrictions on the use of genetic information in Israel, passed by the Israeli parliament's science committee ([image:k Source](#)).

Elaboration

1. The evidence suggests that DNA testing is not illegal in Israel, but it is a subject of legal and ethical debate.
2. The provided sources discuss the use of DNA testing for immigration purposes and the potential for restrictions on the use of genetic information.
3. The claim is not supported by the evidence. The evidence points to the use of DNA testing in Israel, not its illegality.

Final Judgement

The search results indicate that DNA testing is not illegal in Israel, but its use is debated and subject to legal considerations, particularly in the context of immigration and the potential for restrictions on genetic information. The evidence does not support the claim that it is illegal. `false`

Verdict: FALSE

Justification

The claim is false. While the use of DNA testing in Israel is subject to legal and ethical considerations, as discussed in articles from the Harvard Kennedy School of Government ([Source](#)) and Nature.com ([Source](#)), the evidence does not indicate that DNA testing is illegal.
